

HR Report

This HR Analytics Report presents a detailed analysis of workforce data with a focus on three critical HR metrics: headcount, retention, and turnover.

The report outlines current and historical headcount figures across departments and employment types, providing visibility into workforce size and structure. Retention analysis highlights trends in employee longevity, identifying factors that contribute to sustained engagement and areas that may require targeted interventions.

Turnover metrics offer insights into voluntary and involuntary exits, turnover rates by department and tenure, and potential impact on organizational performance. Together, these insights aim to support data-driven decision-making in talent management, workforce planning, and overall organizational strategy.
